I currently work in the field of land surface processes and climate, wherein I have been working on various software tools ([JULES](#), [SDGVM](#), [AquaCrop](#), [ILAMB](#), AutoAssess, and [ESMValTool](#)), as well as developing improved global soil-property maps, improved vegetation parametrization, and improved urban modeling. This work has included being in the [Global Carbon Project](#), wherein I provided SDGVM model output data as part of the TRENDY MIP. I also upgraded the SDGVM model to handle gross land-use transitions. Prior to my work in land surface processes and climate, I worked on using orbital remote sensing to make global maps of Mars with the Mars Express [HRSC](#) camera and the Mars Reconnaissance Orbiter [CRISM](#) hyperspectral imaging camera. I have developed and taught courses in astronomy, planetary science, and climate science. In 2016, I organized a large [internal symposium](#) in the geosciences dept. at the Free Univ. of Berlin. In 2024, I co-organized another large internal symposium in the meteorology dept. at the Univ. of Reading.
