

autoQs – What you need to know

autoQs is an Excel-based program for delivering questions, problems and examples for self-study purposes. Before you use it for the first time, you need to make sure that your PC has the following programs assigned as the defaults for opening files with these extensions

DOCX	Microsoft Word (or a similar program for reading DOCX files)
PPS	Microsoft Powerpoint (or a similar program for reading PPS files)
PDF	Adobe Acrobat or Adobe Reader (or a similar program for reading PDF files)

If you encounter any errors, make a note of what they say, and notify the lecturer who made this file available to you.

autoQs has been written by Dr Karen Ayres, Department of Mathematics and Statistics, University of Reading. It was funded by a University Teaching Fellowship award.
